

Responsum Health

Benchmarking Report

When we launched our first Responsum Health patient knowledge app in 2019, we set out to create a new digital tool for individuals with chronic disease in the hopes of improving patient self-confidence, decision making, and outcomes. Now, after two years of building apps and bringing communities together, we're seeing data on self-reported user improvement that exceeds our highest hopes.

Below are the survey results compiled from **4,899 respondents** between October 2021 and May 2022 from across our PF, CKD, Uterine Fibroids, Glaucoma, and Long COVID communities.

01. Confidence in current disease knowledge

How confident do you feel about your general understanding of your condition and its impact on your life?"

Before using a Responsum app

After using a Responsum app for 3+ weeks

02. Confidence in knowledge of available treatment options/disease management (diet changes, meds, etc.)

How confident do you feel about your current understanding of what treatment options are available to you?

Before using a Responsum app

After using a Responsum app for 3+ weeks

03. Confidence in decision-making

How confident do you feel about the information you have access to and how well it allows you to make healthcare decisions for yourself?

Before using a Responsum app

After using a Responsum app for 3+ weeks

04. Confidence in engagement with providers

How confident do you feel about your ability to ask the "right" questions when you are with your doctor?

Before using a Responsum app

After using a Responsum app for 3+ weeks

05. Confidence in outlook (Empowered- In control - Emotional status)

How confident do you feel about how mentally prepared you are to deal with your condition and its challenges?

Before using a Responsum app

After using a Responsum app for 3+ weeks
